NatSCA supports open access publication as part of its mission is to promote and support natural science collections. NatSCA uses the Creative Commons Attribution License (CCAL) <http://creativecommons.org/licenses/by/2.5/> for all works we publish. Under CCAL authors retain ownership of the copyright for their article, but authors allow anyone to download, reuse, reprint, modify, distribute, and/or copy articles in NatSCA publications, so long as the original authors and source are cited.

1. I can continue to publish the records in this form;
2. I can publish a more condensed version e.g. - Kent Vol. 1 p.10, 28-9, 60, 73, 75 etc.
3. I can extract the information and send it to those curators who request it.
4. I can assume that I have primed the pump sufficiently and you will all rush to get hold of a full run of the journal to read through yourselves, and I can forget it.

I would welcome some feedback on the most useful way of presenting this information in the future.

If you have found this list of records useful maybe you would like to do the same for your local/regional journal, or one of the national ones. There are vast numbers of biological records in the journals dealing with conchology, arachnology, entomology, botany etc. and none of us has the time to check them all. Between us we could make a start on it.

Bill Ely,  
Clifton Park Museum.

## London foxes

Fox-watch is the latest project to be organized by the London Wildlife Trust, and aims to record all the foxes living in or commuting to the Greater London area. The results will not only aid conservation but will be vitally important if rabies is ever brought into this country. The Trust also hopes to be able to find one good fox site which can be set aside specially for the study of foxes. Anyone living in the Greater London area can join in the Fox-watch by getting in touch with Fox-watch, 52 Browns Road, Walthamstow, London E17.
